In linear algebra, a matrix is in echelon form if it has the shape resulting from a Gaussian elimination. Row echelon form means that Gaussian elimination has operated on the rows and column echelon form means that Gaussian elimination has operated on the columns. In other words, a matrix is in column echelon form if its transpose is in row echelon form. . Therefore, only row echelon forms are ...

In linear algebra, a square matrix A is called diagonalizable if it is similar to a diagonal matrix, i.e., if there exists an invertible matrix P such that $P^{-1}AP$ is a diagonal matrix. If V is a finite-dimensional vector space, then a linear map $T : V \rightarrow V$ is called diagonalizable if there exists an ordered basis of V with respect to which T is represented by a diagonal matrix.

Eine symmetrische Matrix ist in der Mathematik eine quadratische Matrix, deren Einträge spiegelsymmetrisch bezüglich der Hauptdiagonale sind. Eine symmetrische Matrix stimmt demnach mit ihrer transponierten Matrix überein.. Die Summe zweier symmetrischer Matrizen und jedes skalare Vielfache einer symmetrischen Matrix ist wieder symmetrisch. Die Menge der symmetrischen Matrizen fester
