The finite element method (FEM), or finite element analysis (FEA), is a computational technique used to obtain approximate solutions of boundary value problems in engineering. Boundary value problems are also called field problems. The field is the domain of interest and most often represents a physical structure.

Introduction to Finite Element Analysis (FEA) or Finite

The finite element method was characterized by the subdivision of the total domain of the problem into a set of sub-domains called elements. The union of such elements gave the total domain. The subdivision of the domain into such components is laborious, necessitating mesh generation.
